4 Reasons Why Liners in the Landscape Make Sense

1. Healthy, high-quality liners establish quickly. Worry less about replacement costs.

2. Our liners are well-rooted, and they're ready to take off when planted in the ground.

3. The soil volume in a small container is limited, yet plants continue to photosynthesize. That excess energy is stored for future use.

4. They're cost-effective, especially for mass plantings where you need coverage and easy installation.
